Hasnain Gill

Moseley, VA | (804) 946-0747 | HGill2017@icloud.com

PROFESSIONAL SUMMARY

Seeking a Sr. Data Analyst position where I can leverage 7+ years of experience delivering enterprise BI solutions, data analysis, reporting, data integration, and data-driven solutions that support operational and strategic decision-making. Strong experience translating business requirements into technical data and analytics solutions using Power BI, SQL/T-SQL, Power Query, DAX, SSIS, SSRS, and enterprise data platforms. Experienced in requirements gathering, data quality, data validation, data governance, data modeling, ETL, reporting automation, root-cause analysis, and stakeholder collaboration. Proven ability to bridge business and technical teams, analyze complex enterprise datasets, define KPIs and business rules, and communicate analytical findings to technical and non-technical audiences. Experienced with Microsoft Azure, Microsoft Fabric, enterprise data platforms, and Agile delivery.

TECHNICAL SKILLS

- **Business Intelligence & Analytics:** Power BI, Tableau, DAX, Power Query, Business Intelligence, Dashboard Development, Interactive Reports, Self-Service Reporting, KPI Development, Business Performance Analysis, Ad Hoc Analysis, Statistical Analysis, Trend Analysis, Data Visualization, Data Storytelling, Diagnostic Analysis, Actionable Insights, Executive Reporting, Operational Reporting
- **SQL & Data Modeling:** SQL Server 2020/2022, SSMS, Advanced SQL, T-SQL, Complex Queries, Joins, CTEs, Stored Procedures, Views, Query Optimization, Relational Databases, Data Modeling, Reporting Datasets, Data Warehousing, Enterprise Data Warehouses, **Data Retrieval**, Reusable Query Logic
- **Data Engineering & ETL:** ETL/ELT, SSIS, Data Pipelines, Data Integration, Data Transformation, Data Processing, Data Validation, Data Cleansing, Data Reconciliation, Enterprise Data Sources, APIs, Data Lake Concepts
- **Data Quality, Governance & Lifecycle:** Data Quality Management, Data Governance, Data Standards, Data Lineage, Data Management
- **Cloud & Modern Data Platforms:** Microsoft Azure, Microsoft Fabric, Snowflake, Enterprise Data Platforms
- **Programming:** Advanced SQL, T-SQL, Python, Data Analysis, Statistical Analysis
- **Business Analysis & Collaboration:** Solution Design, Solution Assessment, Business Needs Analysis, Data Requirements, Stakeholder Engagement, Business-Technical Translation
- **Microsoft Tools:** Advanced Excel, PowerPoint, Word, Access
- **Tools & Methods:** SSRS, Jira, SDLC, Agile, QA

PROFESSIONAL EXPERIENCE

Programmer Analyst – Reporting | Business Intelligence Analyst

Lincoln Tech | Remote
February 2019 – Present

- Own and deliver BI and analytics solutions from requirements gathering through development, testing, validation, deployment, and ongoing support, partnering with business stakeholders to understand business needs, assess requirements, define KPIs, prioritize requests, and deliver data solutions that support business outcomes.
- Design, develop, and maintain Power BI dashboards, interactive reports, and self-service BI solutions using Power BI, SQL Server, SSRS, Power Query, DAX, and reporting datasets, translating complex data into intuitive visualizations and actionable insights for business users.
- Review and analyze multiple enterprise datasets to identify trends, patterns, anomalies, data quality issues, operational risks, and root causes, translating analytical findings into actionable insights that support business decisions.
- Translated complex business requirements and enterprise data into intuitive Power BI dashboards, analytical visualizations, and actionable insights that improved visibility into operational performance and supported data-driven decision-making.
- Develop and optimize complex SQL queries using joins, CTEs, stored procedures, views, and other SQL techniques to extract, transform, validate, and organize data from multiple enterprise systems for reporting and analysis.
- Respond to data and reporting requests by identifying appropriate data sources, developing queries and analytical outputs, validating results, and communicating findings clearly to stakeholders based on business requirements.
- Build and maintain data models, reporting datasets, and analytical data structures using SQL, Power Query, DAX, and relational databases to support scalable, reusable, and user-focused analytics solutions.
- Support solution design by evaluating data sources, reporting requirements, data quality considerations, integration needs, and technical constraints to identify practical analytics and reporting solutions.
- Apply data profiling, data quality, validation, reconciliation, and quality-control practices, including data checks, solution testing, report testing, analytical review, exception analysis, and documentation, to identify discrepancies and ensure data and reporting solutions align with business requirements and expected outcomes.
- Investigate reporting and data issues, perform root cause analysis, and collaborate with data engineers, developers, business analysts, and business stakeholders to implement effective solutions.
- Conduct ad hoc and exploratory analysis across large datasets to answer business questions, investigate anomalies and root causes, identify trends and patterns, evaluate business performance, and deliver actionable insights and analytical recommendations.
- Develop and maintain documentation covering data sources, business definitions, reporting requirements, data definitions, transformation logic, business rules, reporting processes, and analytical workflows to support consistent and scalable reporting.
- Partner with cross-functional business and technical stakeholders to elicit business, functional, and data requirements, evaluate reporting and analytics needs, prioritize solutions based on business value, and translate business objectives into effective BI and data solutions.
- Optimize SQL queries, data transformations, DAX calculations, data models, and reporting solutions to improve performance, reliability, usability, and scalability.
- Automate recurring reporting and data-processing activities using SQL, ETL workflows, and SSRS subscriptions, reducing manual effort and improving reporting consistency.

- Provide technical support, guidance, and user training for report users, helping stakeholders interpret dashboards, understand analytical results, and effectively use BI solutions to support business decision
- Present analytical findings, trends, KPIs, and reporting results to technical and non-technical audiences using dashboards, visualizations, reports, and clear data-driven explanations.
- Contribute to reporting modernization and Microsoft Fabric initiatives by improving data accessibility, reporting workflows, analytics capabilities, and scalable Microsoft-based data solutions.
- Work within Agile development practices, including requirements gathering, prioritization, development, QA, troubleshooting, documentation, stakeholder communication, and deployment.
- Support standardized reporting processes by documenting business rules, reporting definitions, validation procedures, and data-management practices, helping promote consistent interpretation and use of operational data across stakeholders.
- Maintain consistent business definitions, reporting rules, data requirements, and metric definitions across reporting solutions to support data governance, reporting consistency, and reliable interpretation of business metrics.
- Applied statistical and analytical techniques to evaluate business data, identify trends and patterns, investigate anomalies, measure performance, and generate insights that supported operational and strategic decision-making.
- Analyze end-to-end data and reporting processes, document data flows, dependencies, business rules, and data requirements, and collaborate with technical teams to ensure data solutions align with business needs and expected outcomes.
- Collaborate with technical and business teams throughout the build, test, validation, and release of analytics solutions, using Agile practices to deliver reliable and scalable reporting products.

PROJECTS

Executive Sales Performance Dashboard | Power BI & SQL

- Extracted and transformed business data using SQL and Power Query, applying data cleansing, validation, and reconciliation techniques to prepare reliable analytical datasets.
- Designed a reusable Power BI data model and developed DAX measures, KPIs, calculations, filters, drilldowns, and interactive visualizations aligned with business reporting requirements.
- Analyzed business performance, trends, and patterns to identify meaningful insights, recognize performance drivers, and support data-driven planning and decision-making.
- Validated dashboard metrics and outputs against source data, investigated discrepancies, performed data quality checks, and optimized queries, transformations, calculations, and report performance.
- Documented data sources, business definitions, transformation logic, reporting requirements, business rules, validation processes, and dashboard functionality to support consistent and maintainable reporting.

KEY ACHIEVEMENTS

- Developed Power BI dashboards, KPI reporting, and analytical visualizations that improved visibility into business performance, operational metrics, trends, and key business outcomes.
- Improved reporting accuracy and data reliability through data verification, validation, reconciliation, quality-control checks, report testing, exception analysis, and analytical review.
- Identified and investigated data anomalies, discrepancies, and reporting issues, partnering with stakeholders and technical teams to determine root causes and implement appropriate solutions.
- Improved reporting consistency and scalability through reusable SQL queries, data models, reporting datasets, standardized business rules, and repeatable reporting processes.

- Improved reporting efficiency by automating recurring reporting and data-processing activities, reducing manual effort and improving consistency.
- Developed Power BI dashboards, performance indicators, KPI reporting, and analytical visualizations that improved visibility into operational performance, trends, and key metrics.
- Conducted ad hoc analysis and recurring reporting to identify trends, investigate data issues, answer business questions, and support informed decision-making.
- Developed technical documentation and knowledge-sharing resources covering data sources, business definitions, reporting workflows, transformation logic, business rules, analytical methodologies, and reporting processes.
- Contributed to reporting modernization and enterprise data initiatives, improving analytical workflows, data accessibility, reporting capabilities, and data-driven decision-making.

EDUCATION

Master of Science in Data Science and Analytics
Concentration: Full Stack (AI/BI Analytics)
Old Dominion University | Expected Graduation: December 2027

B.S. in Technological Systems Management
Stony Brook University (Graduated: 2017)

B.S. in Computer Programming / Information Systems
Farmingdale State College (Classes taken: August 2017 – December 2019)
